

they are legally sanctioned to do, but do not communicate it to the consumer. Unable to pay, they are disconnected from the grid or declared defaulters. The only solution, says Palit, is for the Discoms to become more efficient in meter records, computation, ease of collection, and rapid grievance redressal.

The third is whether electricity can be provided in a sustainable fashion, with revenue that matches supply and use. The trust deficit between consumers and discoms plays a major role in that.

India produces surplus energy, so much so that Union power minister RK Singh recently announced that India would be looking to export power to Sri Lanka, Nepal and Bangladesh.

India added 25GW of capacity in Financial Year 2017, of which 58 per cent was renewable. But according to the Soubhagyashema statistics, 29,755,021 or 13% households are yet to be electrified. Generation of power is no longer the issue. The obstacles now are social and procedural.

The wealthier farms in the Dahigaon stretch on the periphery of the forest do

electrification to last-mile connectivity to households.

This made the inclusion of isolated hamlets possible.

not see why they should allow government poles on their land. Power officials at the local office at Khardi are not tasked with making the push.

As per their records, Dahigaon was electrified 15 years ago -- the rest is in the gram panchayat's hand. Extending the lines will involve a cost of ₹25 lakh per kilometer, and nothing about 225 adivasis with no economic or vote bank value justifies that cost.

Lydia Powell, energy and climate change expert with the Observer Research Foundation says it's a problem the government recognises. "Dalit areas don't get access to electricity because upper-class communities force the pole to be set up in their areas. The change in definition of measuring units (from revenue villages to households) was done to address this. It is a good first step, however it is also true that the ground reality doesn't always reflect the administrative change," she said.

There have been studies that this inequality of distribution -- no Andreas Kemmler's Factors influence household access to electricity' in and Hisaya Oda and Yuko Tsujita's determinants of rural electrification 2011 -- but none enumerates the degree of conscious distinction the socio-economically deprived have faced. Per Powell suggests, the government should place poles in Dalit and adivasi areas and ask the upper classes to draw their from there.

Independent microgrids do allow lets to bypass the politics of power. house gets four plug points and light One bulb replaces the kerosene lamp in the kitchen. Children play after and the time of sleep has shifted by hour or two. Workers no longer have to walk back from their day jobs in the to Mixer-grinders, fans and mobile phones are on wish lists.
